

Yellowbird®

November 20, 2025

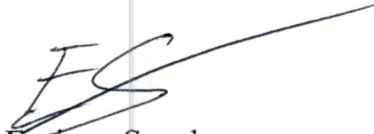

To Whom It May Concern:

Yellowbird Foods manufactures and bottles hot sauce products under the Yellowbird brand. In our facility we use two ingredients in two products that contain allergens. The Plum Reaper contains soy, while the Hatch Chili contains sesame. These products are produced on the same equipment where we produce our non-allergen products.

We have a stringent protocol regarding storage, processing, bottling and warehousing finished goods products under our Allergen program. The protocol and test methods are validated by a 3rd party annually. Internally we test for allergen throughout the machines that are affected after we run an allergen product.

In addition, we do not have any of the other seven allergens in our facility. These include dairy, egg, wheat, fish, shellfish, tree nut, and peanut.

Spicy salutations,

Enrique Sanchez
Quality Assurance Supervisor
Yellowbird Foods
